Westwood®: A manufacturing success story

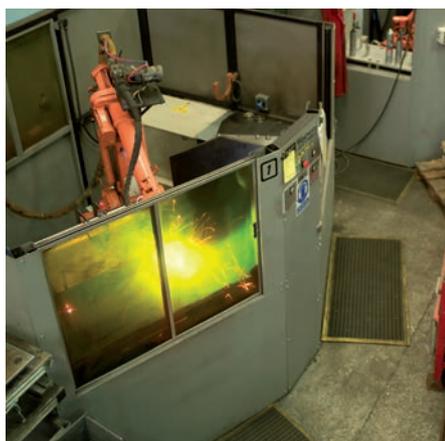

Built in Britain for British gardens

Westwood is a British manufacturing success story. Our factory, located just outside Oxford, has been producing tractors for over 30 years. It's a state-of-the-art facility utilising the very latest manufacturing technology.

What really sets Westwood apart though is the people who build the tractors. Each and every employee is passionate about our products and they continuously work to drive quality at each stage of the manufacturing process.

This passion begins with our engineers. Our latest range of tractors was designed in conjunction with Westwood customers and dealers. By listening to and understanding how our tractors are used in 'real life' conditions, we strive to develop innovative products which exceed the expectations of our customers.

By following this principle, Westwood designs all of its products to specifically cope with the unique conditions of the British climate. Electronic controls are weatherproofed, while painted components have surpassed 500 hours of continuous salt spray exposure without corrosion – one of the most stringent tests available.

Westwood recently joined Made in Britain, the official collective mark for British manufacturers. We are proud to display this symbol on all of our garden tractors.

Built for
British gardens

A tractor for all seasons

Westwood: A better garden tractor

First and foremost a Westwood garden tractor is an outstanding lawnmower. Its unique cut and collection system, developed specifically for the British garden, sets it apart from any other machine on the market. A Westwood allows you to cut shorter, collect fully and stripe a lawn, even when the grass is wet.

Why do we say 'A tractor for all seasons'? Own a Westwood and you have a small, rugged tractor that can be used all-year round in your garden. Where most 'ride-on mowers' fail, a Westwood excels – it's designed to be used in all weathers.

A push-button* controlled power take-off drives accessories and attachments that extend your tractor's use beyond that of a conventional ride-on mower. Scarify your lawn in spring, collect leaves in autumn or spread salt in winter – a Westwood is an invaluable tool for every month of the year.

For added convenience and versatility, Westwood has introduced an optional PGC+ Cassette System for its T and F Series tractors. A range of interchangeable cassettes including a Grass Sweeper, fitted as standard in the PGC+, a Scarifier and Hard Surface Brush cassette** transform your Westwood into a multi-use workhorse.

Parked side by side with a competitor machine, it's clear that a Westwood is in a class of its own. It's built to professional standards. A heavy-duty steel body, cast front axle (T Series only) and reinforced cutter deck ensure reliable performance over a very long working life.

*Available on the T and F Series. The V Series has a manually operated PTO
** Hard Surface Brush cassette available 2020

PGC+ cassette system

Maximum
versatility

The world's most effective grass collection system just got even better

The PGC+ is much more than just a grass collector. A range of interchangeable cassettes transform your T or F Series tractor into a multi-use, year-round workhorse.

Maintaining the garden and grounds is now much easier. The Grass Sweeper cassette comes as standard with the PGC+. A Scarifier and Hard Surface Brush** are also available.

The cassettes are designed to save you both time and money. There's no need to unhitch the grass collector from the tractor and re-attach a different accessory. Simply remove the collection net, take out the current cassette and load the next one. This new cassette system is also cost-effective as there's no need to purchase standalone equipment.

** Hard Surface Brush cassette available 2020

Cut and Collect system

Grass Sweeper

The XRD deck's contra-rotating blades discharge the grass clippings to the rear of the deck

Cut and collect
wet grass

Pick up what others leave behind...

The British weather is notoriously unpredictable. Make a plan to mow your lawn and it seems inevitable that it will start to rain. A Westwood is the only machine that 'cuts it in the wet'.

Most 'ride-on mowers' rely on the air flow caused by the cutting blades to throw lawn clippings into the grass catcher. This system can be noisy and inefficient. Damp grass will often get clogged in the deck and discharge chute, requiring regular unblocking and an unacceptable finish on your lawn.

The Westwood cut and collect system works in a better way. The three hardened-steel blades found in the heavy duty Westwood XRD and IBS decks, are contra-rotating and throw the clippings to the rear of the deck. The ejected grass is swept up by the Grass Sweeper cassette, part of the optional PGC+ system*. Fifty-one brushes rotating at over 1100rpm sweep clippings and garden debris into the hopper.

The Westwood 'system' means that even wet grass can be cut and collected fully, with little risk of clogging. Leaves and other garden debris can be quickly cleared from the lawn. Simply drive over the material with the collector engaged.

A Westwood will NOT clog

The Westwood collection system uses brushes to sweep up the grass cuttings

*Available for T & F Series tractors only. V Series tractor has an optional 390 litre PGC

Cut and Collect system

Grass Sweeper

A high quality, striped lawn finish

Westwood believe that you shouldn't have to compromise the quality of the finish of your lawn for the speed and convenience of a ride-on lawnmower.

Many British gardeners seek a striped finish for their main lawn. Not only do stripes look smart, they can also give the illusion of a longer, greener lawn plus they provide the high-quality finish that many customers desire.

Stripes are created by the contrasting shades of grass laid flat in one direction and then again in the opposite direction.

This effect can be difficult to accomplish with a conventional rotary ride-on mower. Often a separate pass with a heavy lawn roller or 'striping kit' is required and results can be mixed.

A Westwood tractor works in a different way to other machines. It leaves a striped finish every time thanks to a heavy roller mounted in the PGC+* unit which produces the quintessentially English striped lawn finish. The unique action of the sweeping brushes enhances the striping effect further. A Westwood stripes a lawn every time with a single pass of the collector.

*Available for T & F Series tractors only

Stripe your lawn

PGC+ cassette system

Scarifier

Encouraging a thicker, lusher lawn

In order to ensure a lawn looks great and is also healthy and disease-free, it needs to be scarified to rid it of thatch and moss.

Scarifying removes surface thatch which enables oxygen, light and nutrients to penetrate the grass roots, encouraging thicker, lusher growth. Westwood's optional Scarifier cassette, part of the PGC+ cassette system*, makes light work of this laborious process.

Twenty-four individual tines rip through the thatch and moss at high-speed, removing material from the bed of the lawn and into the hopper. Simply insert the scarifier cassette into the PGC+ and start scarifying.

Another benefit of the Scarifier cassette is there is no need to buy a separate walk-behind scarifier and collection system. The PGC+ does them both simultaneously, saving time and money. Simply empty as you would grass clippings.

A powered scarifier is available for the V Series tractor, driven by the tractor's power take-off. Use the Powered Grass Collector to sweep up the unwanted thatch and empty as you would cut grass.

*Available for T & F Series tractors only

Scarify your lawn

PGC+ cassette system

Hard Surface Brush*

Clear leaves, dirt
and garden debris

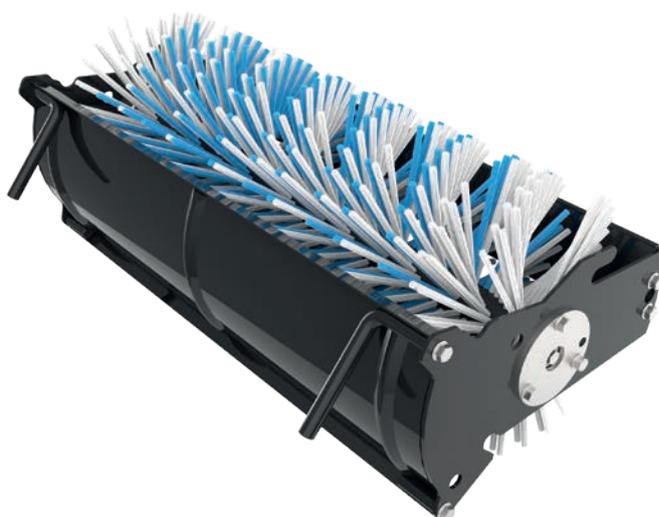

Brushing hard work aside...

Having spent time and effort achieving the perfect looking lawn, dirty driveways, paths and patios can be overlooked, thus spoiling the overall look of your grounds.

Sweeping these areas manually is often hard work, time consuming and can leave debris behind. With the Hard Surface Brush cassette* inserted into the PGC+, these jobs become both quick and easy.

Your T or F Series tractor instantly becomes a heavy-duty powered broom. This easy-to-use attachment helps you to maintain all areas of your grounds** throughout the year.

The heavy-duty bristles rotate at speed, removing material including large piles of leaves, dirt and dust from hard surface areas that a manual broom may not fully remove. Debris is swept into the PGC+ net, so separate collection is not required.

* Hard Surface Brush cassette available 2020

** Area should be checked for accessibility with the tractor

Cutting without collection

High Grass Mulch Deck

Clear tall grass,
nettles and brambles

Make short work of tall grass, brambles and nettles

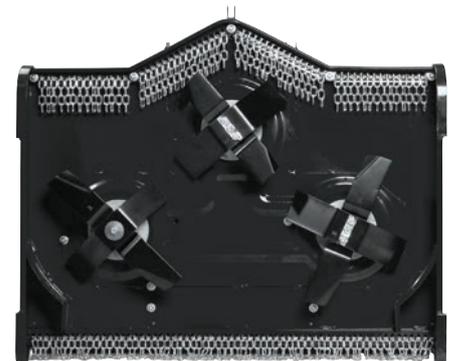

... a versatile deck that will tame the roughest orchard or paddock yet still produce a great finish on a lawn...

When the going gets really tough, the Westwood High Grass Mulch (HGM) deck is in a class of its own.

Using the same principles as an agricultural mulcher, this deck is capable of cutting thick long grass, brambles, thistles and scrub. Chains located at the front and rear prevent the grass from being completely flattened and stop it escaping before being cut. Six hardened steel mulching blades cut multiple times, with the resulting mulch left on the ground to decompose.

But what may surprise you about the HGM deck is that it is equally at home cutting shorter grass on a lawn, meaning there is no need to change decks. There are many benefits to mulching, including achieving a healthier lawn as the mulched grass clippings provides nutrients for the soil.

Available deck sizes are 92cm (36") or 107cm (42")*.

*See page 34 for tractor compatibility

Features of a Westwood

Foot controlled transmission.

A Westwood is so easy to drive. One pedal controls forward speed and the other reverse. The further you press the pedal, the faster you travel.

Robust controls. All levers, controls and switches found on a Westwood are built and tested to withstand continuous use.

Engines. Westwood only fit premium quality engines from Kawasaki and Ariens.

Heavy-duty, durable construction.

Features such as a cast front axle (T Series) and a reinforced cutter deck design means that a Westwood will outlast most other machines available on the market. Each and every component used on the tractor is selected and tested for its durability in 'real life' use.

Power take-off. Power to drive the grass collector and accessories is taken directly from the engine. An independent clutch allows you to use the PTO to power accessories with the cutting blades disengaged.

Automotive-style steering. The ball-bearing steering found on the T and F Series is easy to use and tough enough to withstand the knocks and bumps of everyday use.

Ergonomically designed for easy access and operation. The unique steering wheel design and seat operation (T and F Series) allows easy access on and off the tractor. Switches and controls are intuitive to use and are positioned within comfortable reach of the operator.

Features of a Westwood

Operating Management System (OMS)

OMS is a simple to use dashboard display. Everything you need to know about your tractor available in one location.

Every Westwood tractor is fitted with OMS*, Westwood's unique on-board computer. This system works independently from the main functions of the tractor, monitoring the engine, cutter deck and power take-off. It provides an 'at-a-glance' view of the operation of your machine – just like a car dashboard display.

Most Westwood tractors include low fuel warning and RPM monitor*. The RPM monitor on the electronic display indicates the engine speed. If revs fall, the cutter deck symbol flashes red to indicate to the user that the deck should be raised or forward speed reduced. This means the best possible cut for the conditions can be achieved.

**T40 garden tractor dashboard shows running hours, Powered Grass Collector and cutter deck status*

T Series 2WD Garden Tractors

Britain's 'workhorse' garden tractor

The T Series has been a favourite of British gardeners for over two decades. The core benefits of cutting and collecting in the wet, striping a lawn and being able to use the machine all-year round, make the T Series the tractor of choice for thousands of customers.

Like all Westwood tractors, a T Series is built to a much higher specification than most 'ride-on lawnmowers'. It's extra-tough. With a heavy-duty steel chassis, cast front axle and reinforced cutter deck, a T Series is designed to handle the rigours of hard work – day in, day out.

The push-button controlled power take-off drives a range of accessories, including the PGC+ and broadcast spreader, extending the use of the tractor. For added convenience and versatility, the optional PGC+ Cassette System has a range of interchangeable cassettes, including a Grass Sweeper, fitted as standard, a Scarifier and Hard Surface Brush cassette**.

F Series 4WD Garden Tractors

Powered by
Kawasaki

A 4x4 tractor for your garden

The unique 4TRAC system turns a Westwood into a 'go anywhere, mow anywhere' garden tractor capable of tackling slopes, mud and rough terrain.

Four-wheel drive extends the tractor's utility even further. With an F Series you can take your Westwood to places where most 'ride-on mowers' can't go. Safely mow slopes that previously required a handheld brushcutter to clear. Tow a trailer through a muddy copse or clear the snow from your drive.

4TRAC provides 'on demand' four-wheel drive. It senses where grip is required and applies drive accordingly. Dynamic Traction Control avoids scuffing on your lawn by varying the speeds of the front wheels when turning.

Refined, lightweight steering and a tight turning circle make manoeuvring around obstacles such as trees and flowerbeds easy.

The push-button controlled power take-off drives a range of accessories, including the PGC+ and broadcast spreader, extending the use of the tractor. The optional PGC+ Cassette System features a range of interchangeable cassettes, including a Grass Sweeper, fitted as standard, a Scarifier and Hard Surface Brush cassette**. Turn your 4x4 tractor into a year-round workhorse.

F65-4WD	FS481V Kawasaki twin cylinder 603cc	107cm (42") XRD rear discharge	92cm (36")
F255-4WD	FR730V Kawasaki twin cylinder 726cc	122cm (48") XRD rear discharge	92cm (36")

V Series Garden Tractors

A larger tractor for a larger garden

The V25-50HE is Westwood's largest garden tractor. The 726cc Kawasaki engine drives a 127cm (50") IBS rear discharge deck or 127cm (50") Combi deck and an optional 390 litre Powered Grass Collector. The bigger deck and collector mean that this tractor can cut a larger area faster than the smaller T or F Series.

Suitable for grounds of around three acres or more, the V Series will make short work of mowing lawns, paddocks and orchards.

The extra-large collector is lifted and emptied via push button control. Its larger capacity means fewer trips to empty cuttings. With 58cm rear wheels and a differential lock, the V Series is comfortable to operate on inclines and won't mark your turf.

Garden Tractor Accessories

Use a Westwood for year-round chores

Westwood garden tractors are designed for year round garden care not just for cutting, striping or mulching a lawn. A range of unique attachments are available for the many tasks around the garden.

PGC+ (T & F Series only)

Transform your tractor into a multi-use workhorse by fitting the optional PGC+. Driven by the tractor's PTO, this system features a range of easy-to-fit interchangeable cassettes. Cassettes include a Grass Sweeper, fitted as standard, a Scarifier and Hard Surface Brush**. See pages 8-9 to read more about the benefits of owning a PGC+.

Powered Grass Collector (V Series only)

Even for those wanting to cut without collecting, the grass collector is a useful option. It's the quickest and most efficient way to collect leaves and garden debris and is invaluable for clearing up after scarifying. Brushing also stimulates turf, helping to prevent the formation of thatch, while the integrated roller leaves neat stripes.

Powered Scarifier (pictured on opposite page)

Powered directly by the engine, the offset scarifier fits in place of the grass collector. Its rotating tines remove thatch and moss allowing the grass plant to recover, so improving the overall condition of the lawn. The working height of the scarifier is fully adjustable and, with a 76cm (30") operating width, a lawn can be fully scarified as quickly as it would be mowed. The Powered Grass Collector can be used to sweep up waste material.

Powered Broadcast Spreader

Powered by the tractor's engine, the broadcast spreader has a hopper that holds up to 50kg of granular material. It can be used for quickly spreading salt on icy paths and tracks. Features an adjustable flow rate.

High Grass Mulch Deck

Using the same principles as an agricultural mulcher, this deck is capable of cutting thick long grass, brambles, thistles and scrub. Six hardened steel mulching blades cut multiple times, with the resulting mulch left on the ground to decompose.

** Hard Surface Brush cassette available 2020

Garden Tractor Accessories

Transportation Box *(pictured on opposite page)*

Designed for T and F Series garden tractors, the 120 litre transportation box is ideal for carrying logs, compost and tools. It can be used to transport loads of up to 120kg. Strong and durable, the box is made from heavy duty steel. Both the back panel and corner joints have been reinforced for extra strength. The back panel folds down for easier loading and unloading.

Dust Cover

A purpose designed dust cover for protecting your tractor when not in use. (Please note: this cover is not waterproof)

Snowblade

Fitted with a front-mounted snowblade and high-grip chevron tyres, a Westwood tractor becomes a formidable force in quickly clearing snow from paths and driveways. The tough rubber-tipped edge of the steel snowblade has been specifically designed to clear snow without damaging a concrete or tarmac surface.

Towball

Automotive type ball hitch can be fitted to the tow bar. Tow trailers and other attachments with your Westwood.

Chevron tyres provide extra grip on slippery ground and muddy conditions.

Authorised Westwood dealers are an essential part of the purchasing experience and on-going aftercare of our products. Be assured that as garden machinery specialists with first class product training, our dealers are experts in finding the right Westwood model to suit your requirements. They have the ability to demonstrate first hand, and in your own grounds if desired, the many benefits of owning a Westwood.

Only through our specialist dealers will you receive entitlements such as warranties, product inspections and safety checks on delivery – and have total confidence in the training and advice you will receive. Furthermore, they will carry out the necessary servicing and provide on-going maintenance advice if required.
